

SLIV

This printout lists the items sold since the last time the report was run. Notice the -1, +1, and -1 on Family Communication. This occurs when more items than the computer lists on hand are sold. BSMGR does NOT go into arrears. Fundamentally, you cannot have less than zero in stock. However, sometimes items that BSMGR sees as "on Order" are sold before the product is actually received into inventory. For example, a customer comes in the store to purchase a product that is not on the shelf; rather, the product is in a box that has not yet been received into BSMGR. The SLIV program allows the user to open the box and sell the product without worrying about the "arrears" situation. BSMGR will lower the quantity on hand when the SLIV report is run, instead of at the time the sale was made.
